EXPERIENCE

Raisin — Senior Software Engineer - Full-time

December 2023 - Present

Raisin is a fintech trailblazer in the savings and investments space in the EU and US. As a fintech pioneer, we provide the infrastructure to democratize the global deposit, investment, and pension markets – benefiting both people and financial institutions.

As a Mobile Engineer here, I build the investment parts of the [mobile application](#) for Raisin customers.

Technologies used: React Native, TypeScript, Firebase, Git, GitLab, DevOps.
Company Link: <https://raisin.com>

Oko, Remote — Fullstack Engineer II - Full-time

September 2022 - August 2023

Oko is a US-based, distributed organisation, offering innovation, analytics, and automation tools for faster and smarter solution delivery for freight forwarders in the US.

At Oko, I pioneered the design and creation of **Backstage** with Next.js and AWS. Backstage is a tool utilising AI to automate data entry from clients' emails. After this went live, I continued to play a significant role in building Oko, a dashboard for enhancing visibility into customers' order data. I also built multiple features and reusable components for the company's rebrand effort, "**Green Frog**", hosted on the [landing web app](#).

When Oko pivoted towards **backend** solutions, I **led** serverless AI and cloud solution efforts to automate freight processes, taking several customers and products from idea to pilot and then to live (paying customers), and managing serverless solutions and cloud deployments with AWS and Azure cloud services. After which these solutions were customised by me to onboard new customers with the same pain points.

Technologies used: React, Next.js, TailwindCSS, TypeScript, AWS (Lambda, EC2), Azure, AI, NodeJS, Express, HTML5, CSS3, Git, and GitHub.
Company Link: <https://www.linkedin.com/company/okotrade>

SKILLS

Proficient:

- React Native
- Typescript/JavaScript
- React, Redux, MobX
- Mobile-first development/responsiveness
- Firebase
- Next.js
- React-query
- CSS-in-JS
- Tailwind CSS
- (ES8/ES7/ES6/ES5)
- Webpack, Babel, Rollup
- HTML5
- CSS3
- Git, GitHub, Bitbucket
- WCAG Compliance
- RESTful APIs
- Jest, Storybook
- GraphQL
- Node.js/Express.js
- SQL, MySQL, PostgreSQL
- MongoDB/Mongoose
- Styled-components
- Agile methodologies
- AWS
- Azure

Familiar:

- VueJS, VueX
- Python
- C# (with Unity)
- Java Springboot
- Bootstrap 4
- Angular
- Angular Material

Trix-Day, Remote — Mobile Engineer - Contract

September 2022 - Nov 2022

Trix Day is an all-in-one productivity tool created to make Software Engineers' days more efficient. As a Mobile Engineer At Trix Day, I:

- Created the mobile app for the productivity tool, Trix Day.
- Noticed and fixed Backend bugs.
- Improved Developer Experience by suggesting tools like nodemon and demo-style, conventional commits, and Pull Requests.
- **Technologies used:** React Native, Xcode, styled-components, Material UI, Node.js, Express.js, HTML5, CSS3, Git, and GitHub

Ryu Games, Remote — Software Development Engineer - Full-time

September 2021 - May 2022

Ryu Games is a gaming-oriented company based out of San Francisco, delivering SDKs that enable Game Developers to transform their games into cash or crypto tournaments easily.

At Ryu Games, I single-handedly built **Bayelsa for Moderators** and **Bayelsa for Support**, which are subsidiaries of the **Bayelsa** app. It is a tool that now helps Support agents and Content moderators on their gaming platforms to moderate end-user content and find out more information about user complaints more efficiently.

I also heavily contributed to the Frontend of **Flame**, which is an app store for Ryu Games-backed games and also a crypto space; it is thought of as the "Steam for Web3."

- **Technologies used:** React, Electron, styled-components, Node.js, HTML5, CSS3, Git, Blockchain technologies, and GitHub
- **Company Link:** <https://ryu.games>

Acumen Digital, Remote — Frontend Engineer - Full-time

September 2021 - December 2021

Acumen Digital is a multi-disciplinary product design and software development agency building identities and experiences to elevate and empower organizations.

As a Frontend Engineer on the Acumen team, I helped create **BetaSMS** and a digital, end-of-life will creation application (STL)

- **Technologies used:** Vue.js, React, CSS3, TailwindCSS, Git, and GitHub
- **Company Link:** <https://www.acumen.com.ng>

Nigeria Development Foundation, Remote — Frontend Developer, Angular - Full-time

May 2021 - September 2021

NDF is a financial organization that aims to make it easier for

poor-to-middle-class Nigerians to sell products and provide services by providing them with an automated credit system.

Here, I contributed immensely to the Frontend of the **WealthMarket project** built in Angular/TypeScript; it is the main product of the organization. I don't believe it has gone public yet, but I also helped document it, as it had very little documentation at the time I joined the team.

- **Technologies used:** Angular, Angular Material, SCSS, Bootstrap 4, TypeScript, Git, and GitHub
- **Company Link:** <https://ndfnigeria.wordpress.com>

Genesys Tech Hub, Enugu —Frontend Developer

June 2020 - Feb 2021

As a Frontend Developer with the Hub, I:

- Built creative, sleek, completely responsive, and accessible products using React, HTML5, CSS3, and client-side JavaScript with several software teams in the program.
- Was a Leader on the Genesys Tech Hub [Leader Sheets'20](#) for impressive work and clean code with a 70% code efficiency score for delivering good products right on deadlines, and possibly for the [Learnable Web App](#) I made.
- Led the creation of the [Udunkulu](#) app as Lead Developer. It turned out to be the best project in the virtual cohort 2020. I specifically built out the player and playlist components and authentication modals while managing other parts of the project.
- **Leveraged knowledge of** Git, HTML5, CSS3, JavaScript/ES6, React, and NodeJS and performed unit tests using the Jest testing suite for testing to create wonderful and consistent web experiences.
- Won the Genesys Tech Hub **'Nikola Tesla Award'** for **'Frontend Developer Student of the Year'**.
- **Company Link:** <https://www.genesystechhub.com/learnable>

Kay Computers, Delta – IT intern

June 2017 - September 2017

As part of my secondary school's program, we were required to go on Industrial Training (IT) for a few months before graduation, so I did mine at Kay Computers in Delta State, Nigeria, where I learnt how to maintain computer hardware, fix security and network issues, and write simple applications in HTML, CSS, and Java.

I also helped to train trainees who joined after me since I had learnt a lot and had more experience, due to my technical major in secondary school being Computer Craft Studies.

SOFTWARE PROJECTS

Personal Website

www.miracleufo.codes made with React, JavaScript, and styled-components.

Also, some of the other projects I'm proud to share are below:

GigGap

Mobile platform connecting skilled professionals with projects across Africa. As Lead Engineer, I established coding standards and build processes,

improved typing and debugging across the legacy codebase, onboarded new Engineers, and published a React Native app for real-world testing. Also improved and fixed user gesture handling with the broken in-chat microphone.

- **Technologies used:** React Native, TypeScript, Git, and mobile app testing.
- **Link:** gig-gap.com

LetsDap

Mobile-first app redefining connections. It makes networking at events actually fun and as simple as a digital fist bump – a **dap**. Served 500+ users at its first event, and with mostly positive feedback, **dapping** is here to stay.

- **Technologies used:** React Native, TypeScript, Google Maps, CSS, Xcode, Android Studio, Git.
- **Link:** letsdap.com

react-g-translator

Free, lightweight package for translating languages on web apps on the fly. It had 400+ downloads in the first month of release, and stays in the Top 10 on npm’s “React translator” [search page](#).

- **Technologies used:** React, react-query, TypeScript, Node.js/Express.js, Rollup, and CI/CD.
- **Link:** npmjs.com/package/@miracleufo/react-g-translator

Rick&Morty Search

Rick&Morty Search is a **playful** web application I built for my friends using the Rick and Morty GraphQL API, for searching and filtering information about the previously ended Rick and Morty show’s characters in different episodes.

- **Technologies used:** React, CSS, JavaScript/ES6, GraphQL, and Styled-components.
- **Link:** rick-n-morty-search.netlify.app

HOBBIES

Observing, listening to all kinds of music, art (drawing and painting), swimming, engaging with new tech, and speaking at tech events.

I’m that cool, calm, collected person you want on your team.

EDUCATION

BSc. in Computer Science from the University of Nigeria.

Thesis/BSc. project was a Fintech Loan mobile application, [Borrowise](#), written in React Native.

Awarded ‘Best Female Programmer’ by the **Nigeria Association of Computing Students (NACOS)**

Skills Learned: Algorithms · Network Security · Computer Science · SQL · Web Development · Mobile Development
